Objective

Dot NET developer with experience in enterprise applications, ERP systems, and API-driven architectures, seeking a role where I can contribute to building scalable, efficient, and reliable software solutions.

Experience

- **Codeology Tech Pvt. Ltd.** 05/2024 - Present
Dot Net Developer
 - Developed enterprise web applications using .NET Framework, ASP.NET, SQL Server, PostgreSQL, and frontend frameworks like Angular, Vue.js, React.js, and Knockout.js.
 - Designed, implemented, and maintained full-stack features using Entity Framework and LINQ to Entities.
 - Built and maintained APIs and backend services, ensuring smooth integration with databases and frontend components.
 - Participated in requirements analysis, software design, and architecture planning with internal teams.
 - Wrote clean, scalable, and maintainable code; refactored, debugged, and improved existing applications.
 - Managed code versioning using GIT and supported production systems with troubleshooting and fixes.
 - Worked in Agile/Scrum environments, contributing to sprints, planning, and technical discussions.
 - Suggested and implemented efficiency improvements and new features across applications.
- KWRI – Karnataka Water Resource Information System
 - Maintained and developed new features on the KWRI platform using CSHTML Razor pages and controllers.
 - Created mobile API services and data-importing APIs to fetch and integrate external data, and exported internal data for other systems.
 - Developed database logic using MSSQL stored procedures and functions.
 - Improved system reliability and efficiency for water resource data management.
- EquiLead – equilead.org
 - Maintained and enhanced the full EquiLead platform using .NET Core MVC and PostgreSQL, handling both frontend and backend services.
 - Implemented features for job listings, resource management, and user engagement.
 - Built and maintained APIs and backend services, optimized database queries, and ensured smooth full-stack application performance.

Software Engineer

- Designed and implemented custom HTML templates to improve UI/UX and user engagement.
- Led technology selection initiatives and contributed to process improvements across projects.
- Maintained code quality through peer code reviews and feedback integration.
- Developed SQL Server stored procedures and queries for reporting and data analysis.
- Utilized Dapper, LINQ, and Entity Framework Core for ORM and database interactions.
- Implemented Repository Pattern and RESTful API architecture for maintainable backend services.
- Monitored systems, provided support, and debugged production issues.
- Managed version control with GIT and collaborated effectively in team projects.

Project Requirement & Management System

- Contributed to the design and development of a project requirement collection and management platform.
- Participated in requirement analysis discussions with stakeholders and internal teams.
- Developed backend services and APIs using .NET to support requirement submission and management.
- Assisted in React frontend integration with backend APIs.
- Designed a structured workflow to:
 1. Collect user requirements
 2. Define application screens
 3. Break down requirements to entity-level data models
- Improved project planning, clarity, and development efficiency through structured requirement handling.

ERP System (Core Foundation & Accounting Module)

- Contributed to building the core foundation of an ERP system from the initial development stage.
- Worked on accounting-related modules, including trial balance and financial data processing.
- Applied Clean Architecture principles using Dependency Injection and Repository pattern.
- Designed scalable backend components to support future ERP modules and integrations.

CA Portal – Digital Registration Module

- Worked on a Chartered Accountant (CA) portal module developed under a contractual project.
- Converted a manual and legacy registration process into a smart digital registration workflow.
- Implemented backend validation, business rules, and secure data storage.
- Improved system usability, data accuracy, and processing efficiency through digitization.

Queue Management System (QMS)

- Strongly focused on backend development for a Queue Management System used by counter-based staff.
- Designed and implemented APIs and business logic for queue creation, token management, and counter assignment.
- Supported integration with:
 - Mobile applications for notifications
 - Large display screens for real-time token calling and queue status
- Ensured smooth communication between backend services, counter staff interfaces, and display systems.

Parking Management System (PMS – Legacy Desktop Application)

- Worked on an existing legacy .NET desktop Parking Management System used for fee collection and record tracking.
- Added a user registration feature, extending system functionality while maintaining legacy stability.
- Ensured backward compatibility while introducing new enhancements.

Additional Contributions (Live Systems Support)

- Actively involved in debugging, maintaining, and enhancing live production systems.
- Fixed production issues, added new features, and improved system stability.
- Provided technical support and collaborated with cross-functional teams to ensure smooth operations.

• Abhiyantrik Technology Pvt. Ltd.

07/2020 - 02/2022

Fullstack Developer

- Developed full-stack applications using ASP.NET MVC, RESTful APIs, and SQL Server.
- Built frontend components using MVC architecture and ensured UI compliance with design specifications.
- Designed and maintained backend APIs and integrated with database using Entity Framework.
- Configured and managed IIS Web Server for deployment of applications.
- Worked in Agile/Scrum environments, participating in planning and daily stand-ups.
- Managed version control with GIT and collaborated on team projects.

• Able InfoTech

07/2018 - 11/2019

Backend Developer

- Developed and maintained backend features using C# and .NET Framework.
- Contributed to moderately complex problem-solving and feature implementation as guided by senior engineers.
- Provided technical support, debugging, and enhancements for existing web applications.
- Applied GIT and version control workflows within a team environment.

Education

• NCIT/Pokhara University

Bachelor of Computer Engineering

2015-2019

• Khwopa Higher Secondary School

High School

2014

Skills

- Programming & Frameworks: C#, .NET Core, .NET Framework, ASP.NET MVC, Node.js, Laravel, OOP, RESTful API development
- Frontend & UI: Angular, React (Next.js), Vue.js (Nuxt.js), Razor/CSHTML, HTML/CSS, JavaScript, Knockout.js
- Databases: MSSQL, PostgreSQL, Entity Framework, Dapper, LINQ, Stored Procedures
- DevOps & Version Control: GIT, Bitbucket, IIS, Docker, CI/CD basics
- Other Skills / Tools: Agile/Scrum, API design & integration, Application debugging, Full-stack development
